

ABSTRACT OF THE DISCLOSURE

7/1/03
A
~~It is an object to provide a controller in a banding~~
packing machine which can easily set a correct condition
when the controller for clamping, returning and tightening

5 a band has a timing shifted from a predetermined timing. A
controller in a banding packing machine comprises a cam
shaft (22) to be rotated upon receipt of force from a
driving source, a plurality of cams (24, 26, 28) provided
in the cam shaft (22), a timing plate (45) provided in the
10 cam shaft (22) and having holes (42, 44, 46) formed
corresponding to predetermined positions such that a
rotation position of the cam shaft (22) can be detected,
and detecting means (50) for detecting that the holes (42,
44, 46) formed on the timing plate (45) reach the
15 predetermined positions, wherein an inching mode is
provided in which the rotation of the cam shaft (22) is
stopped when the detecting means detects the predetermined
holes (42, 44, 46) of the timing plate (45).
